And immediately after the phone release Apple, as usual, released a guide to reveal all new features. The former design of the new iPhone 6s can fake you and you may think that nothing has changed. But this is far from the case. And the proof is the specifications of the phone. The iPhone 6s has not only a new and stylish color of pink gold but also a new body material - the famous aluminum seven-piece series. The use of this material reduces the risk of damage by light contact with the hard surface. Thanks to the new framework material, the glass has become more hardy. And the next generation Touch ID is really super-fast, snap-action scanner, you don't have to wait a fraction of a second for the device to react. The iPhone 6s features an updated A9 processor with 64-bit architecture. The processor speed is 70% higher than the previous generation, and the GPU is 90% faster, providing instant feedback in resource-intensive applications and games. As for wireless connections, it supports the standard 4G LTE Advanced and 23 LTE range. With a Wi-Fi connection, it allows you to work online and download apps almost twice as fast. The main highlight of the new iPhone 6s is the 3D Touch. It is a screen surface technology that allows the smartphone to detect the force of pressure, distinguish short and long press, as well as the pressure exerted screen when pressed. The main camera of the new smartphone got all updated: resolution, optics, matrix.
