Spruce/Chrissy Pk is a pretty origami fish cute decoration and a fun way to push your origami skills. This traditional origami model is simple and takes just a couple of minutes to make. Since it's not too hard, it's great for kids to do. This traditional origami fish starts with the base of the origami windmill (which is shown). Once you master traditional fish, there are many ways to decorate them. You can create a whole school of fish in different colors. Another creative idea is to make Shikishi origami, which is a themed display. For this Shikishi, you can make a water display. Use blue paper, put the fish in the water, add a turtle, maybe a sailboat on top, perhaps a swan origami, and make a pretty scene to display in your home. This origami chart should be useful to work with to make your fish. By following the origami charts, it's helpful to look at the step you need to take next, as well as the next one to see what it should look like. Don't worry if you don't succeed in the first place. Origami is practicing. For this fish, you will need one sheet of square origami paper. Best to start with the usual origami paper 15 x 15 cm. el/Chrissy Pk 1. Fold the paper in half in both directions and unwrap. 2. Fold the left and right edges to the middle. 3. Fold the upper and lower edges to the center. 4. Turn the top and bottom flaps. 5. Pull the left and right flaps from the middle up and side. 6. Crush the bottom edge to the center. 7. Now repeat steps 5 and 6 at the top. 8. Fold the top left and bottom points, as shown in the video. Spruce / Chrissy Pk 9. Fold the corner with the green dot to the red dot. 10. Fold the flap down from the center, as shown. 11. Fold the corner with the green dot to the red dot. 12. Fold the flap down from the center, as shown. 13. Fold the top and corners to the right, as shown in the video. 14. Here's what it's supposed to look like. 15. Turn the model to the other side. Spruce / Chrissy Pk 16. Now you can tap the area of your mouth in a bit and draw the eyes. For playful fish, feel free to add to your eyelashes. If you want, you can draw your mouth as well. You can make a smiling mouth, wrinkled lips, or anything else to give your fish personality. Remember that origami can take practice. Make another one and it will be better than the first one! For more instruction as well as video instructions, check out Kawai's YouTube paper. If you're stuck on a certain step, watching video times in action can be quite helpful. Johnny Vallant's perfect compliment to the lively setting of the adorable origami paper faucet table is located inside a miniature bird cage. Follow these instructions to learn how to make one for your own table. 1. Starting with a perfectly square sheet of paper (we used origami paper, but any thin paper do), fold it diagonally to create a triangle. If the paper is only painted on one side, fold it so that the color side is shown. 2. Fold it in half again, with lines from the widest (right) angle and the longest edge to create another triangle. 3. Lift the crease and open it (holding the other half of the paper), then smooth it so that the crease from the long edge is in the center of the square. Turn over and repeat. Now it will look like a square. 4. Take one of the open sides and fold it to align with the central fold. Repeat on the opposite side to form a kite shape. Turn over and repeat. 5. Expand the folds you just did and then lift from the open edge of the square to create a long diamond along the folds. Do the same on the reverse. 6. Fold the bottom side edge to the split in the middle of the diamond. Do the same on the opposite side, then flip and repeat. 7. Fold both lower sides to each other to meet and then do the same on the reverse. Now the split appears at the top. 8. Raise the bottom point and fold to the top. Turn over and repeat. 9. Fold the flaps together and do the same on the opposite side. 10. Tug gently at the widest tips to open the wings. 11. Fold one of the skinny tips to make a faucet head. You're done! This content is created and supported by a third party and is imported to this page to help users provide their email addresses. You may be able to find more information about this and similar content on piano.io Using a simple follow-up tutorial, you can learn how to make a little origami butterfly. This is a traditional origami model, which is a good introduction to the art of paper folding popularized by the Japanese. The word origami means folding paper (ori means folding, and kami means paper in Japanese). The origami butterfly has a simple but elegant look. Once you learn to do one, you don't want to stop. The whole group of paper butterflies makes a beautiful decoration of the wall. You can also use them to decorate hand-held cards, scraps, and even as a finishing touch on the gift package. You will need one sheet of square paper for each origami butterfly. For a bold look, use hard colored paper. If you want an elegant and traditional Japanese look, try the authentic washi paper. Washi paper is made in the traditional way and processed by hand from fibers, originally from Japan. The fibers come from the inner bark of the gumpi tree, the Mitsumata shrub or the mulberry paper bush. You can also use other types of paper such as newspaper, a sheet of music, or wrapping paper to make them if you don't have any fancy origami paper. You can practice on paper until you get used to folds so as not to waste the paper you are going to use for your project. As you fold the paper, make sure your folds are as crisp and clean as possible, overdo the folding though, because you don't want the paper to rip. If you have two-sided colored paper, start by papering the white side up to make sure your butterfly is painted when it is done. 1 sheet of square-shaped paper Start by folding diagonally, in both directions, and then then paper in half, in both directions. Fold all four corners into the center. Spruce/Chrissy Pk Flip the paper over, and fold all four corners into the center. Expand the previous step and turn the model to the other side. Turn the paper around. Spruce/Chrissy Pk fold right side to center. Fold the left side to the center, too. Holding the paper in the center, pull out the right flap to the right. Pull out the left flap in the same way, and smooth out the top. Spruce/Chrissy Pk Make the same right and left flaps for the bottom. Smooth out what you have. It should look like a squat, pretty horizontal hexagon. Fold the top section behind. Smooth the model. Spruce/Chrissy Pk Flip right layer down. Turn the left flap down. Fold a small area inside where it is indicated. Fold the model in half to the right. Spruce/Chrissy Pk folded a small section where shown. Turn the back layer to the left. Reverse once the left side of the times you just created. If your butterfly doesn't come out as an illustration, just give it another go. The problem, usually, is that your folds are not as accurate as you hoped. Just get a new paper and start over and remember that origami is getting easier with the practice of spruce/Chrissy Pk keeping an eye out for the latest daily buzz with the BuzzFeed Daily Newsletter! Chrissy Pk Learn how to make a cute little origami turtle or turtle. The technique is officially Kirigami, which involves one incision during the process. Kirigami is described as a variation of origami, which involves cutting paper with scissors to achieve the result. However, if you are looking for Kirigami online, you can instead find many pop-up cards and other complex paper creations. In traditional origami there are several known models where cutting is an integral part of the manufacture of origami. If you're looking for a few more origami animals to make, check out the origami jumping frog, the traditional origami world of pigeon, and the easy origami fox. 1 square sheet of paper of any size (minimum 5 inches by 5 inches for convenience) If your paper is the same color on both sides, it doesn't matter which side you start the folds on. If your paper has a white side, start with this side up. Fold the paper in half diagonally so that you have a triangular shape, as shown in the display. Fold the bottom right corner to the middle point. Do the same on the left side. Chrissy Pk folded the top of the right flap down to the bottom. Fold the top left flap down as well. Fold about one-third of the bottom right flap to the right. Repeat on the left side. Chrissy Pk with scissors, cut the top front layer, which was not folded. Cut out the bottom point in the center. Now you should be able to move layers of flaps, as shown in the shown. Fold the top layer of the bottom flaps to match those you've already folded by following the mini step number 3 above. Fold the left and right dots inside, not all the way to the middle. you'll have to use a little glue to make these these stay put. Chrissy Pk folded the top points that you cut out. To form a head, fold these flaps back up, leaving a small gap. (It's called a crease.) Turn the turtle to even more form the body. For example, fold it in half for a more three-dimensional look and add a marker to your eyes for a funny touch. If you make a turtle, fold the dots for a more rounded shell, legs and head. Chrissy P.
